

FOR IMMEDIATE RELEASE

Filtronic awarded \$0.9m follow-on contract for 5G mmWave modules

SEDGEFIELD, UK — 08 June 2022 — [Filtronic plc](#) (AIM: FTC), the designer and manufacturer of RF-to-mmWave components and subsystems, has announced the award of a follow-on contract for full production units of over-the-air 5G mmWave modules for a US-based customer in the test equipment market.

The new contract, valued at \$0.9m (approximately £0.7m), follows on from the successful delivery of a pilot production phase in late 2021. The mmWave product extends the frequency range of the customer's existing product offering above 50GHz by employing Filtronic's extensive mmWave specific design and manufacturing know-how.

"We are delighted to have been chosen as the production partner for these technically challenging mmWave products," said Richard Gibbs, CEO of Filtronic. "Once again, we have been able to demonstrate the importance of our in-house manufacturing, and our ability to take a design all the way through from initial concept into full production. Not only does this contract help with our strategic objective of broadening the customer base, but it also addresses an important new sector of the telecommunications market."
